

The UI tree $T = (N, r, p, \chi, \ell)$ as nested brackets

Reading: a left bracket $[$ encloses a node with its whole subtree — nesting = ancestry, indent = depth, vertical order = child-order χ . Each $n_i \in \mathbb{I}$ is an identity; $\ell(n_i) = \delta = (\tau, A, S, E, \rho)$ is its element.

a second top-level bracket — detached
